

Excel Practice Questions

- 1 Calculate total sales using the SUM function.
- 2 Find the average sales value using AVERAGE.
- 3 Count the number of non-empty cells using COUNTA.
- 4 Use IF function to classify sales as High (>5000) or Low.
- 5 Remove duplicate records from a dataset.
- 6 Find the maximum and minimum sales values.
- 7 Use VLOOKUP or XLOOKUP to retrieve product prices.
- 8 Highlight top 10 sales values using Conditional Formatting.
- 9 Create a Pivot Table to summarize sales by region.
- 10 Create a Pivot Chart to visualize sales data.
- 11 Find the top 5 selling products.
- 12 Use COUNTIF to count sales above 5000.
- 13 Use SUMIF to calculate total sales for a specific region.
- 14 Create a line chart showing monthly sales trend.
- 15 Build a simple sales dashboard using charts and Pivot Tables.

Python Practice Questions

- 1 Import the Pandas library and load a CSV dataset.
- 2 Display the first 10 rows of the dataset.
- 3 Check the shape of the dataset.
- 4 Identify missing values in each column.
- 5 Filter rows where sales are greater than 5000.
- 6 Calculate the average sales value.
- 7 Find maximum and minimum sales values.
- 8 Sort the dataset by sales in descending order.
- 9 Group sales by region using groupby().
- 10 Replace missing values using fillna().
- 11 Create a new column profit = sales - cost.
- 12 Create a bar chart using Matplotlib.
- 13 Plot a line chart showing sales trends.
- 14 Export cleaned data to a new CSV file.
- 15 Perform basic exploratory data analysis (EDA).

Power BI Practice Questions

- 1 Import a dataset into Power BI.
- 2 Create a bar chart showing sales by region.
- 3 Create a card visual showing total sales.
- 4 Create a pie chart for sales by category.
- 5 Add slicers to filter data by region.
- 6 Create a line chart showing monthly sales trend.
- 7 Create a table visual with product sales.
- 8 Create a DAX measure for total sales.
- 9 Create a calculated column for profit.
- 10 Create a profit margin measure using DAX.
- 11 Add drill-through filters for product details.
- 12 Use conditional formatting in a table visual.
- 13 Create a dashboard combining multiple visuals.
- 14 Use date hierarchy for year and month analysis.
- 15 Publish the dashboard to Power BI Service.

SQL Practice Questions

- 1 Select all columns from a table using SELECT *.
- 2 Retrieve specific columns from a table.
- 3 Filter records using WHERE clause.
- 4 Find total sales using SUM().
- 5 Count number of rows using COUNT().
- 6 Find average sales using AVG().
- 7 Sort data using ORDER BY.
- 8 Retrieve top 5 highest sales.
- 9 Group data using GROUP BY.
- 10 Filter grouped results using HAVING.
- 11 Use INNER JOIN between two tables.
- 12 Use LEFT JOIN to retrieve unmatched records.
- 13 Find duplicate records in a table.
- 14 Calculate monthly sales using GROUP BY with date functions.
- 15 Write a query to find the second highest salary.
